04 Slashing & Loss Risk

05 Unstaking & Lock-up Periods

06 Fees

07 Tax & Regulatory Disclaimers

SECTION 01

Staking Services

1.1 Docree Demo Exchange (the "Company") offers staking services enabling customers to earn rewards by delegating proof-of-stake cryptocurrencies to validators operated by the Company or its partners.

1.2 Staking is an optional service. Customers retain the option to hold their assets without staking, forgoing both rewards and associated risks.

SECTION 02

Opt-In and Eligibility

2.1 Customers may enable staking on eligible assets via the platform interface. By opting in, the customer authorizes the Company to delegate the customer's staked assets to validators on their behalf.

2.2 Staking services may be unavailable in certain jurisdictions due to regulatory restrictions. The customer is responsible for determining whether staking is permitted in their jurisdiction of residence.

SECTION 03

Rewards Calculation

3.1 Staking rewards are calculated based on the protocol's native reward rate, adjusted for the Company's commission and operational costs. Published annual percentage yields (APYs) are estimates and are not guaranteed.

3.2 Actual rewards depend on network conditions including: total staking participation, validator performance, protocol emission rates, and validator slashing events. Rewards may be higher or lower than the published estimate at any given time.

3.3 Rewards are typically distributed to the customer's account on a daily or epoch basis, depending on the network protocol. The customer can view accrued rewards in the staking dashboard.

SECTION 04

Slashing & Loss Risk

SLASHING RISK

Slashing is a protocol-level penalty that can reduce your staked balance. The Company does not guarantee protection against slashing, and you may lose a portion of your principal if a validator is slashed.

4.1 Slashing events may occur if a validator:

- Goes offline for an extended period (liveness slashing).
- Signs conflicting blocks (double-signing).
- Is penalized by the network for equivocation or other protocol violations.

4.2 The Company selects validators with strong operational track records and implements monitoring to minimize slashing risk. However, no guarantee can be made that slashing will not occur. Slashing losses are borne by the customer in proportion to their stake.

SECTION 05

Unstaking & Lock-up Periods

5.1 Unstaking is subject to network-specific cooldown or unbonding periods, during which the assets cannot be withdrawn or traded. Typical cooldown periods are:

Network	Typical Unbonding Period
Ethereum (ETH)	~1-7 days (validator exit queue dependent)
Cosmos (ATOM)	21 days
Polkadot (DOT)	28 days
Solana (SOL)	~2-3 days (end of epoch)
Tezos (XTZ)	~15 days

5.2 During the unbonding period, assets do not earn staking rewards and cannot be traded or withdrawn. The customer acknowledges this liquidity constraint as a condition of staking.

SECTION 06

Fees

6.1 The Company retains a commission on staking rewards, typically ranging from 10% to 25% of gross rewards generated. Commission rates vary by asset and are disclosed on the staking page.

6.2 The rewards displayed to the customer are net of the Company's commission. No additional staking fees are charged to the customer's principal balance.

SECTION 07

Tax & Regulatory Disclaimers

7.1 Staking rewards may constitute taxable income in the customer's jurisdiction. The Company does not provide tax advice. Customers are responsible for determining and meeting their own tax obligations.

7.2 Regulatory treatment of staking services varies by jurisdiction. Some regulators have classified certain staking offerings as securities. The Company reserves the right to restrict or discontinue staking services to comply with regulatory guidance.
