Table of Contents

01 Order Types

02 Order Matching

03 Trading Fees

04 Market Manipulation Prohibited

05 Trading Halts & Emergency Procedures

06 API Trading

SECTION 01

Order Types

1.1 Docree Demo Exchange (the "Exchange") supports the following order types:

Type	Behavior
Market	Executes immediately at the best available price
Limit	Executes only at the specified price or better
Stop-Loss	Triggers a market order when the price reaches the stop level
Stop-Limit	Triggers a limit order when the price reaches the stop level
OCO	One-Cancels-Other — pairs a take-profit and stop-loss
Post-Only	Limit order guaranteed to add liquidity (maker), rejected if it would take

1.2 Order types available may vary by market and may change without notice. Users should verify supported order types before placing trades.

SECTION 02

Order Matching

2.1 The Exchange operates a price-time priority (FIFO) matching engine. Orders are matched based on: (1) best price first, and (2) earliest order time at that price.

2.2 Orders may be partially filled. Unfilled portions remain in the order book until fully executed, cancelled by the user, or expired by the system.

SECTION 03

Trading Fees

3.1 Fees are charged using a maker-taker model. Makers (liquidity providers) are typically charged a lower fee (or rebated), while takers (liquidity consumers) pay a higher fee.

3.2 Standard fee tiers are based on 30-day rolling trading volume and are published on the Exchange's fee schedule page. Fees are deducted from the asset received in the trade.

SECTION 04

Market Manipulation Prohibited

4.1 Users shall not engage in conduct that distorts the market or misleads other participants, including:

- Wash trading: Buying and selling to oneself to create false volume.
- Spoofing: Placing and quickly cancelling orders to mislead other traders.
- Layering: Placing multiple orders at different price levels with no intent to execute.
- Pump and dump: Coordinated buying to inflate a price, then selling to profit.
- Front-running: Trading ahead of known pending orders using privileged information.
- Front-ending insider info: Trading on material non-public information about listings or delistings.

4.2 The Exchange actively monitors for manipulative behavior. Violations may result in trade cancellation, profit confiscation, account suspension, or reporting to law enforcement.

SECTION 05

Trading Halts & Emergency Procedures

5.1 The Exchange may halt trading in any market at any time due to:

- Extreme price volatility or circuit-breaker triggers.
- Exchange maintenance, platform upgrades, or technical incidents.
- Suspected manipulation or coordinated attacks on the order book.
- Regulatory, legal, or compliance requirements.
- Blockchain network congestion or unconfirmed deposits exceeding risk thresholds.

5.2 During halts, existing orders may be cancelled. The Exchange will provide reasonable notice of planned maintenance but reserves the right to halt without notice in emergency conditions.

SECTION 06

API Trading

6.1 Programmatic trading via API is subject to rate limits published in the API documentation. Users exceeding rate limits may have their API access throttled or suspended.

6.2 Users are responsible for the actions of any bot, script, or service operating under their API credentials. Loss of funds or liability arising from API misuse or credential compromise is borne solely by the user.
